

ON!Track - PROCORE Integration

ON!Track - Procore integration: data mapping

Integration benefits and value

Reduce duplication of effort:

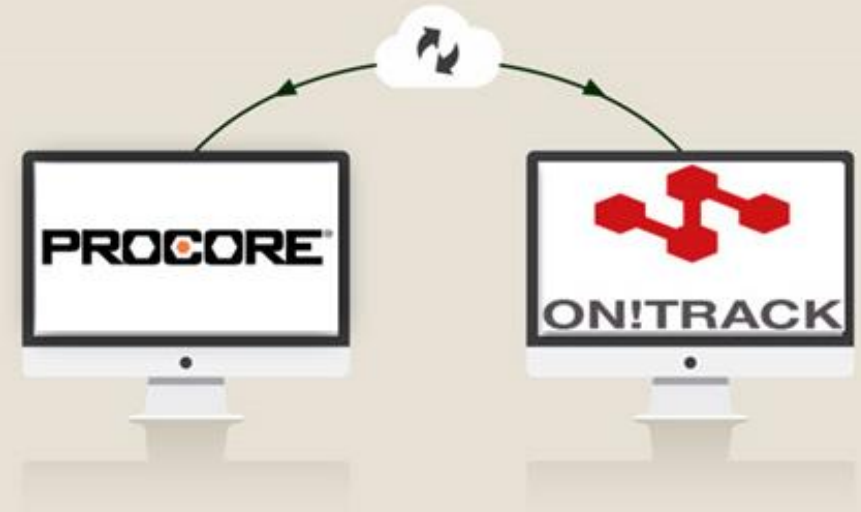

- Eliminate the need to enter the same information multiple times in different places.
- Connected data updates automatically from the lead platform, eliminating the need for manual changes in the receiving software.

Improve data quality:

- Entering the data once reduces the likelihood of errors, misspellings, or other issues.

Boost transparency:

- Shared data across platforms is more accessible to all users without expert knowledge or switching between multiple systems.
- Field transaction visibility provides Procore users with insights they need to make informed purchasing or rental decisions.

Data mapping details
